

Tom Renard

Senior Product Engineer

renard.tom35@gmail.com • tomrenard.site • github.com/tomrenard • linkedin.com/in/tom-renard-2021 • Berlin, Germany

SUMMARY

Senior product engineer with 6+ years building customer facing web products, mostly React and TypeScript. I own features end to end: shaping the requirement with product and design, building across the stack, then owning the rollout and the read on the result. Deepest in frontend, comfortable in Go and Ruby services and the infrastructure in front of them.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go, Ruby, SQL.

Frontend: React 19, Next.js (App Router, RSC), Astro, Tailwind CSS, WCAG 2.2.

Platform: GraphQL, Postgres, Terraform, CloudFront, Docker, GitHub Actions, Datadog, Playwright, Vitest, Claude Code.

EXPERIENCE

Aroundhome | Senior Software Engineer

Berlin, DE | Jun 2026 to Present

React • TypeScript • Astro • Go • Ruby • Terraform

Two-sided marketplace for home improvement: homeowners describe a project, Aroundhome matches them with vetted local trade companies, and the partner pays for the introduction. Thousands of requests a week.

- **Contact flow:** kept customers on the brand site they arrived on for the contact step, instead of redirecting them to our main domain. Shipped across the frontend, the backend services and the CDN routing, live on nine domains. Adding another is now configuration rather than a project.
- **Feature ownership:** own customer facing features end to end, from shaping the requirement with product and design through to the rollout and the read on the result.
- **Design to code:** co-own the design to code rollout: design tokens, a Tailwind v4 config and the shared component library out to its consumer apps, sequenced through a tracker I maintain.

Doodle | Senior Frontend Engineer

Berlin, DE | Apr 2023 to May 2026

Next.js • TypeScript • GraphQL • Nx

Scheduling platform used by millions of people a month.

- **Feature adoption:** launched the Sign-up Sheets product, which drove a 25% increase in active product usage.
- **Core flow:** reworked the participation flow, which lifted completed polls by 5% across millions of monthly users.
- **Next.js migration:** moved three production applications to the App Router, improving reliability and developer velocity.
- **Accessibility:** took the UI to WCAG 2.1 AA ahead of the European Accessibility Act deadline.

Aklamio | Frontend Engineer

Berlin, DE | Jun 2021 to Mar 2023

React • TypeScript • Redux

Referral platform for enterprise clients, 100k+ monthly users.

- **Enterprise scale:** built and maintained the React and TypeScript applications behind the platform.
- **Internal tooling:** extended the core internal JavaScript libraries the other squads built on, with high test coverage and cross-browser support.
- **Reliability:** re-architected the API integrations that kept losing data.

Freelance | Full Stack Engineer

Berlin, DE | Sep 2020 to Sep 2021

Next.js • Gatsby • Sanity

Client work for e-commerce sites and small agencies.

- Delivered production Next.js applications with optimised SEO and caching for e-commerce clients.

SELECTED SIDE PROJECTS

Repères 2027 (Astro, TypeScript). Voting advice app for the French presidential election. Every candidate position carries a dated source and the build fails without one.

Wattson and Sparfuchs (Python, Claude Code). Personal endurance coach and tax advisor: deterministic scripts do every calculation, the model only does judgement.

EDUCATION

Full Stack Web Development, Le Wagon, Berlin

2020

Master in Management, EM Normandie

2018
